Damascus

DAY 1 - Monday 27th October

08:30 – 09:00 | Welcome and Introduction

Participant registration and overview of the training objectives.

09:00 – 11:00 | Practical Management Strategy for Emergency Casualties

Operational framework for casualty management

Recognition and assessment of severity in emergency victims

Review of life-threatening conditions in emergency medicine

Management strategy for casualties under threat (SAFE method)

11:00 – 11:15 | Break

11:30 – 12:30 | Pain Management in Emergency Medicine

Assessment and evaluation of pain

Principles and strategy for treatment selection

Rationale for pain management in emergency settings

12:30 – 13:30 | Management of Circulatory Distress

Hypovolemia:

Definition and underlying mechanisms / Treatment principles: venous access, fluid resuscitation, use of central lines, blood transfusion, and surgical intervention when indicated / Types and preparation of vascular access routes

Ventilation:

Oxygen therapy principles / Modes of oxygen administration / Basic airway management maneuvers (LVA recall) / Intubation setup and alternatives / Use of mechanical ventilation

MEDICAL CONGRESS**
Damascus, 24, 25, 26 October 2025
Medical Innovation and Advocacy for Syria

Damascus

DAY 1 - Monday 27th October

15:00 – 15:30 | Hemorrhagic Shock

Identification and immediate management of hemorrhagic shock
Emergency interventions: hemostasis when feasible, vascular filling
Understanding the pathophysiology of hemorrhagic shock
Therapeutic strategies and priorities

15:30 – 16:00 | Burns and Explosive Injuries

Management strategy for burn and blast victims
Understanding the pathophysiology of severe burns
Assessing burn severity and estimating total body surface area (TBSA) burned
Identifying associated injuries
Managing shock and respiratory distress
Pain control strategies
Patient triage and referral

16:00 – 16:15 | Break

16:15 – 17:00 | Traumatic Injuries: Cranial, Spinal, and Thoracic

Emergency management, severity assessment, recognition of localization signs, respiratory and circulatory distress
Identification of spinal (neurogenic) shock
Understanding the physiology of traumatic brain injury (TBI)
Available therapeutic interventions
Determining therapeutic urgency criteria
Implementing an appropriate treatment strategy for severe TBI
Recognizing associated vertebro-medullary trauma
Specific considerations for immobilization and transport of such patients
